Re:

To whom it may concern,

Fiber optics is very important with our efforts in attracting new business and industry to our area as locations with inadequate connectivity are passed over for projects requiring broadband. To have this service would give us the competitive edge over communities who do not. Moreover, if we lack fiber optics infrastructure we not only lose out on recruiting new business, we also will not attract more people to move to our area. People want to live in a community that has this amenity. It also improves the manner in which health care and many public services are delivered. The difference in speed saves companies money and they want to come to a community where this is offered. It may be the only reason a company selects our area. We need to take the lead to make that happen.

Sincerely,

Becky Allgood, Executive Director
Wilton Development Corporation
